

VS Code & GitHub

A Developer's Guide

Master the essential tools for modern software development

Lucas Brown

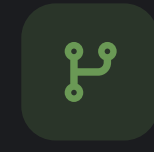

¿Qué es VS Code?

Editor de código abierto de Microsoft

Visual Studio Code es un editor de código fuente gratuito, ligero y potente desarrollado por Microsoft. Basado en Electron, funciona sin problemas en Windows, macOS y Linux.

Ofrece soporte avanzado para JavaScript, TypeScript, Node.js y un sin fin lenguajes de programación. Su diseño modular permite un inicio rápido, cargando solo las herramientas necesarias para el proyecto actual.

¿Por qué los desarrolladores lo aman?

-  **Muy Rápido**
Se inicia en segundos, con un consumo mínimo de recursos.
-  **Highly Extensible**
Más de 30.000 extensiones.
-  **Totalmente personalizable**
Temas, combinaciones de teclas, ajustes y más.
-  **Soporte Git integrado**
Integración de control de versiones lista para usar.

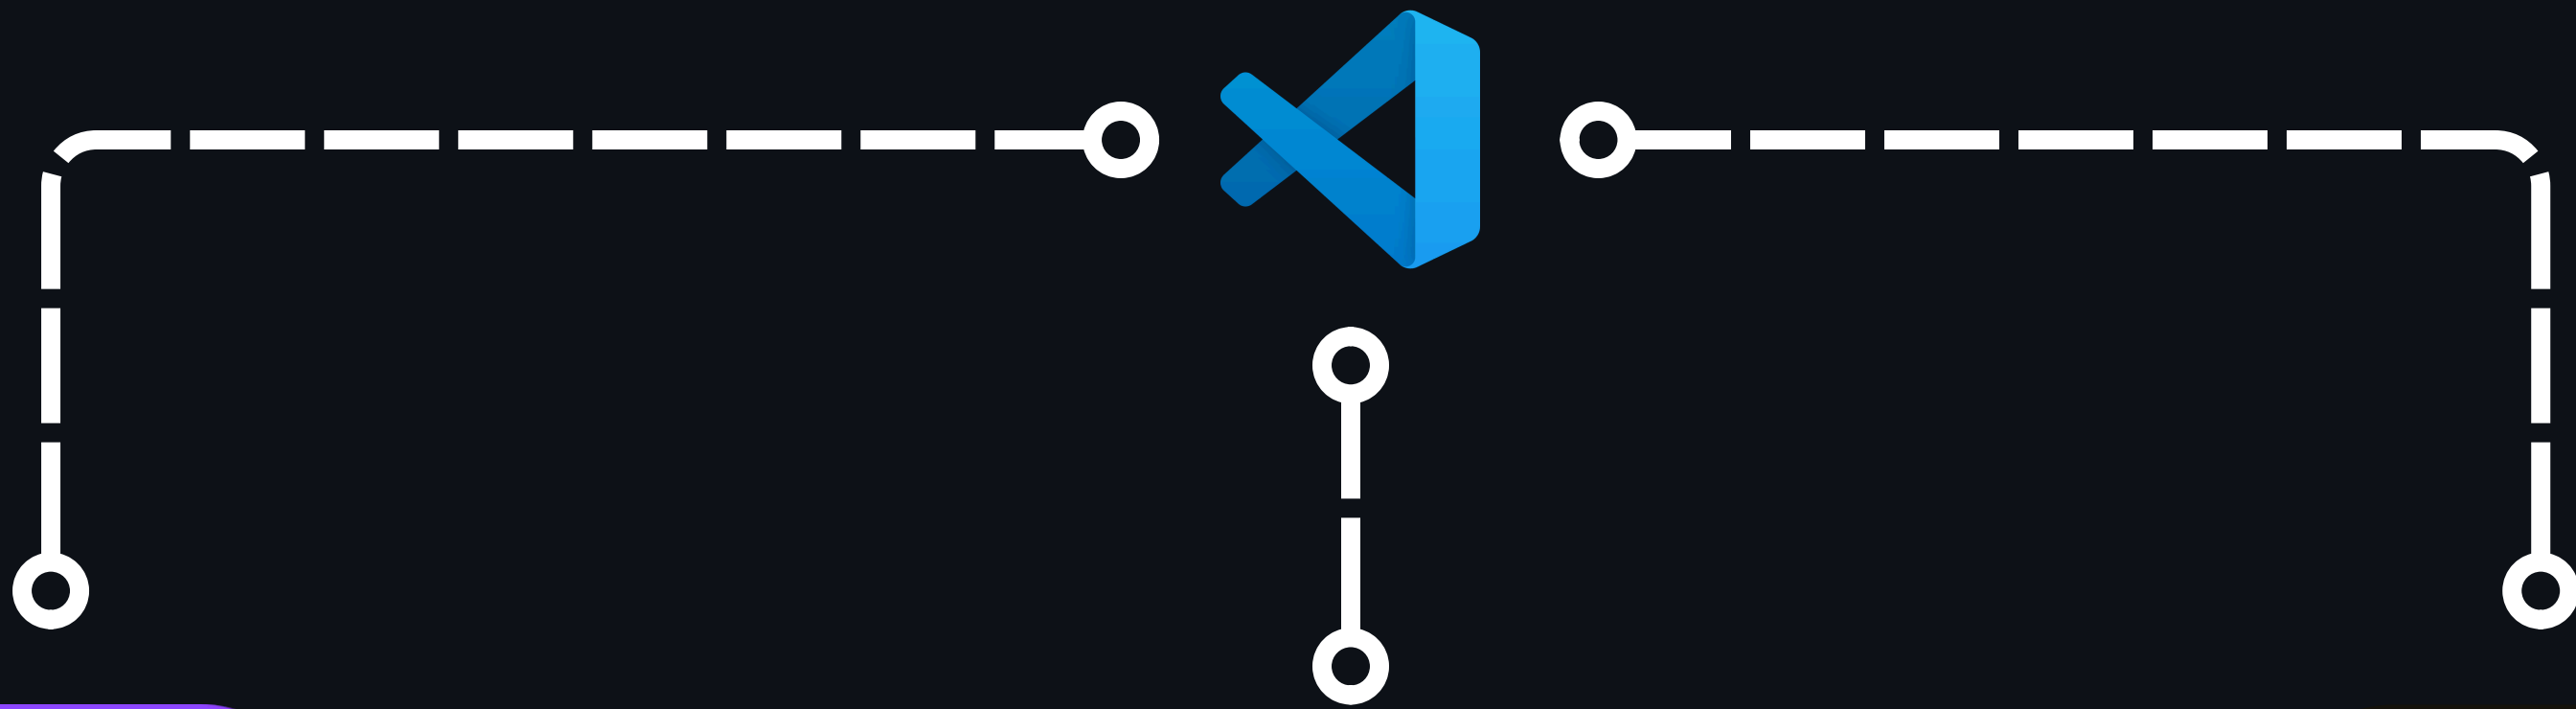

Windows

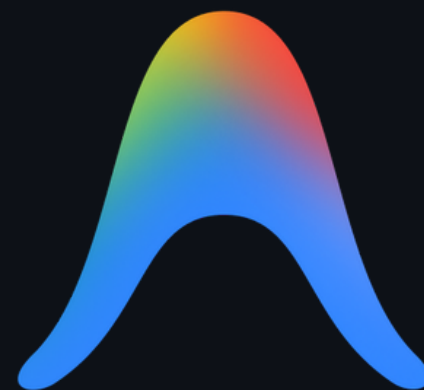

macOS

Linux

KIRO

ANTIGRAVITY

CURSOR

Entendiendo GitHub

¿Qué es GitHub?

GitHub es una plataforma en la nube para alojar y colaborar en repositorios Git. Es la comunidad de desarrolladores más grande del mundo, con más de 100 millones de usuarios.

i Git & GitHub

Git

Un sistema de control de versiones que rastrea los cambios de código localmente en tu máquina.

GitHub

Una plataforma de alojamiento que almacena repositorios Git en línea y añade funciones de colaboración.

¿Por qué usar GitHub?

- ✓ Control de Version
- ✓ Revisión de Código
- ✓ CI/CD
- ✓ Colaboración
- ✓ Seguimiento de problemas
- ✓ Gestión de proyectos

chore: move presentation file to testing directory

LBrownl committed 29 minutes ago

Fix duplicate git commands in README

LBrownl authored 33 minutes ago

Format README instructions for clarity

LBrownl authored 33 minutes ago

Revise README with updated workshop instructions

LBrownl authored 35 minutes ago

Make sure you configure your 'user.name' and 'user.email' in git.

[Open Git Log](#)[Learn More](#)[Cancel](#)

Your Identity

The first thing you should do when you install Git is to set your user name and email address. This is important because every Git commit uses this information, and it's immutably baked into the commits you start creating:

```
$ git config --global user.name "John Doe"
$ git config --global user.email johndoe@example.com
```
